2 Release Notes

A new update to the ISWC database software is planned. This will be the first production release since the go live of the new ISWC database at the end of July. The REST API definition itself has not changed. However, some fixes to business rules may cause legitimate rejections following this release where previously a technical exception or no error was raised. Agencies and hubs who directly interface with the ISWC database should consider if they need to do any testing of their integration software with this release in UAT before it is deployed to production.

2.1. Communication

UAT has been completed and these release notes are now final. A copy of these release notes will be emailed to all email addresses that have an active subscription to the REST API in production as follows:
