1 Introduction

What does this document contain?

This document provides details of the new ISWC Database REST API.

Who should read this document?

ISWC Agency development and project management personnel who are interested in using the API to assign ISWCs to works and interact with the ISWC database.

References

Reference

Description

2 Overview

This chapter provides an overview of the REST based service that will be provided by the new ISWC Database. These services are intended to be used by Societies/ ISWC Agencies that want to interface directly and in real time with the new ISWC database.

The definition for this REST based Web API is included in the associated swagger definition export referenced in this document and directly through the ISWC Database developer portal (See API Management below).

Note: Agencies who are using any other existing CSI APIs including legacy CSI SOAP and REST based services will need to transition to this new ISWC Database REST API in advance of the go live of the new ISWC Database.

2.1. Getting Started

A developer web portal is provided to manage the external interface of the ISWC Database REST API (test portal available at <u>https://cisaciswcuat.developer.azure-api.net/</u>).

This developer portal provides the documentation needed to enable society/agency integration with the ISWC Database through all supported integration methods, including the REST API. In addition, it provides:

- API subscription key management
- Interface for exploring the API and generating test transactions
- Sample code snippets in HTTP, Curl, C#, Java, JavaScript, PHP, Python, Ruby and Objective C

To get started do the following:

1. Navigate to <u>https://cisaciswcuat.portal.azure-api.net/</u> and explore the available content:

ISWC Networ	» ′ k
HOME APIS PRODUCTS ABOUT THE ISWC DATABASE	JOHN CORLEY -
Welcome to the CISAC ISWC Databa This is your single source of information for integrating with Sign up	se Developer Portal the ISWC database
AUGULT (THE 13 YFC DEGUBBEE The SWC International Standard Work, Code – ISO 15707/2001) was designed as a system of assigning a globally unique identifier code to musical works for the benefit of the key value chain participants composers, authors, publishers, broadcasters, tracking services and members of CBAC. Find out more about the SWC Database	Society integration with the ISWC Database has never been easier. You can now integrate travagit
For Publishers	

2. "Sign up" to gain access to the API in the test environment

	Sign up Aready a member? Sign in new Create a new API Management account: Email Imma Passeord Confirm password Confirm password Confirm password Ext name	
	Enter the characters you see New Autio	

Once you complete the "sign up" form you should receive an activation email from <u>apimgmt-noreply@mail.windowsazure.com</u> within five minutes or so. Click on the link on this email to activate your account and sign in.

Note: If you need to register multiple users then repeat these steps (1-6) for each user.

3. Navigate to the "Products" page and select the "ISWC Agency API"

4. Enter a subscription name and press "Subscribe"

Your subscription name should include your society name. E.G. "BMI ISWC Subscription"

ISW HOME APIS PRODU		ног	IN CORLEY +
Subscribe to A new subscription will be ca Product: Description Subscription name: Confirm Cancel	product varied as follow: Inver Agency APP Inver Agency APP		

5. Your subscription details, including a primary and secondary API subscription key will be shown

		. M

At this point you should receive another email from apimgmt-

noreply@mail.windowsazure.com indicating that your subscription request requires approval. You should allow up to two working days for your subscription to be approved. As part of the CISAC approval process, the primary CISAC contact within your Agency/Society will be informed of the request.

6. Try out the API

Once you receive an email from <u>apimgmt-noreply@mail.windowsazure.com</u> indicating that your subscription has been approved you can log into the developer portal and test out the API directly. The following walks through a simple submission scenario:

6.1 Navigate to the API and click on the "ISWC Database Agency REST API"

6.2 Group the API operations by Tag to focus on the relevant ones

ISW	C Network	
HOME APIS PRODUCTS	ABOUT THE ISWC DATABASE	JOHN CORLEY +
Search Q Add tags to search Y 2	ISWC Database Agency REST API API change history ISWC Database Agency/Society REST API	Ł API definition
ISWC Merge	Add a batch of new ISWC submissions to the database Add a batch of new ISWC submissions to the database Invit Request Research LIP	
POST Merge ISWC meta- lata associated with a provided list of ISWCs or society Work Codes and as part of the merge have an SWC designated as preferred.	Includes Unit. http://diadewoulataure-api.net/submission/batch Request headers Content-Regionalizational string Media toes of the body sent to the API.	
SWC Search ^	Ocp-Apim-Subscription-Key string Subscription key which provides access to this API. Found in your Profile. Request body	
FOST Find ISWC metadata for specified batch of Agency and WorkCodes	Array of ISWC subminision objects that need to be added to the ISWC Database application/joon application/writ	
GET Find ISWC metadata for specified ISWC POST Find ISWC metadata for specified ISWCs	Sample Schema [("subdistiont": 0, "subdistion": (

6.3 Select the "Add a new ISWC submission to the database" operation

Review the expected request and response information. Download the API definition (by selecting the API definition drop down and selecting your format of choice) if required. Then select the "Try it" option to create your first ISWC database submission:

ISW	C Network

FOOT Merge ISWC meta- data associated with a provided list of ISWCs or Society Work Codes and as part of the merge have an ISWC designated as preferred.	Reguest URI https://cisacisecust.azum-apl.net/submission Request headers	
ISWC Search	Content-Type (optional) string Media type of the body sent to the API.	
GET Find ISWC metadata for specified Agency and WorkCode	Ocp-Apim-Subscription-Key string Subscription key which provides access to this API. Found in your Photlie. Request body	
FOST Find ISWC metadata for specified batch of Agency and WorkCodes	ISWC submission object that needs to be added to the ISWC Database application/son application/son application/sml	
GET Find ISWC metadata for specified ISWC	Sumple Schema ("agency": "string",	
for specified ISWCs	"workcode": "string",	

6.3 Post a simple work submission JSON into the Body

Note: The following is provided as an example. You should replace the agency, sourcedb, workcode, originalTitle and interestedParties/nameNumber values to reflect your Agency/Society.

6.4 Press "Send" and scroll down to review the results

Congratulations! You have just made your first ISWC Database submission (in the UAT environment).

To review sample code for calling this same operation, select your language of choice and review / copy:

), "parentINE": {

2.2. Recommendations and Best Practice

This section provides some guidelines and best practices for working with the API.

2.2.1. Getting the latest API Definitions

The up-to-date documentation on the latest version of the API can be downloaded directly from the developer portal:

- Select the APIs menu option and choose the "ISWC Database Agency REST API"
- Select the API definition format that works best for you. The corresponding definition file will be downloaded automatically in your browser:

$e \rightarrow e^{-1} = 0$ for some $ $ characeut developer asservations detailed and introduce over hand web spectroperation addition contrasts	Hame APs Products Signis Signis
Contrasting of participant Promotion Contrasting Promotion Promotion	SWC Database Agency REST API Addression of the second of

2.2.2. Managing Request Volume

In order to protect the service, rate limiting has been implemented. This limits the number of requests per minute to 10 and the number of calls per month to 1,000,000. Societies should design their integration solution to handle these limits. One way to do this is to ensure to use the batch version of each operation where possible.

2.2.3. Completing the Loop

The following diagram shows a typical society integration scenario:

Using the ISWC Database REST API for submission transactions (add/update/delete) is an important part of integrating with the ISWC database. However, it is not the complete picture.

Other societies can make changes to ISWCs and associated metadata for works in your repertoire management system. These changes are made available in Notification files from the ISWC Database.

Notification files should be ingested to ensure your repertoire management system is insynch with the ISWC Database. Notifications are available in two supported file formats: ISWC JSON Format and ISWC EDI Format.

You can use the new ISWC Agency Portal to carry out less frequent transactions such as merges, de-merges or ad-hoc time critical submissions and queries.

2.2.4. Managing Change

The REST API is subject to change, especially during the early adoption period from Jan 2020 through to May 2020. We expect changes to be minor and made in response to Society / Agency feedback.

Please review the API change history facility in the developer portal to keep informed of any changes:

2.2.5. Environments

Closer to launch, in July 2020, the production developer portal will be launched. A separate, but similar, subscription process with separate API keys will be used for access to the production environment.

Data in the test environment is subject to occasional refresh from the current live CSI database.

3 REST service

This chapter provides the details of the new REST service for ISWC. The service provides the following main groups of operations: Work Submission, ISWC Search, ISWC Merge and ISWC Workflow Tasks.

Note: Up-to-date details of the fields required and returned for each operation including descriptions etc can be downloaded from the developer portal (see section 2.2.1 "Getting the latest API Definitions" above) and can be tried out directly in the portal itself (see section 2.1 "Getting Started" above). The following is intended as an overview of the information exchanged.

3.1. Work Submission

The following are the submission methods that will be supported by the new REST service.

3.1.1. POST / submission

This operation represents the addition of a new ISWC submission to the database. It is the equivalent of the CAR transaction in EDI.

The POST operation should include a request body that corresponds to the Submission object schema

string
string minLength: 3 maxLength: 3
A CISAC code of a submitting agency that allocated this ISWC
string

3.1.2. PUT / submission

}

This operation represents an update of an existing ISWC submission to the database. Equivalent of the CUR transaction in EDI. The PUT request will include the same required body as the POST above and will return the same response body object.

3.1.3. DELETE / submission

This operation represents a delete of an existing ISWC submission in the database. Equivalent of the CDR transaction in EDI. The DELETE operation accepts the following specific parameters:

DELETE /submission Delet	tes an ISWC submission		÷
Parameters			Try it out
Name		Description	
<pre>preferredlswc * required string (path)</pre>		The preferred ISWC	
agency * required string (query)		Agency of ISWC submission to delete	
workcode * required string (query)		Agency internal workcode for work as previously submitted	
sourceDb * required integer (query)		SourceDb of ISWC submission to delete	
<pre>reasonCode * required string (query)</pre>		Reason Code for the deletion	
Responses			
Code	Description		Links
204	Iswc submission success	sfally deleted	No links
400	Invalid agency and work	t code provided	No links
404	ISWC submission not for	and the second se	No links

3.1.4. POST / submission/batch

This operation represents the addition of a batch of new ISWC submissions to the database. It is the equivalent of the CAR transaction in EDI. The POST operation will include a request body containing an array of SubmissionBatch objects as follows:

Submission{...}

}

The POST operation will return a Multi-Status response containing an array of responses with the following schema:

[VerifiedSubmissionBatch{

submissionId	inte	eger(\$int32)	
	The subr	value of the submiss mission.	sionID from the request
submission	Sub	verifiedSubmission	{ VerifiedSubmission{}
		linkedIswcs	[]
		potentialMatches	[]
	}		
rejection	Rej	ection {	
		code*	string
		message*	string
	}		

}]

3.1.5. PUT / submission/batch

This operation represents the update of a batch of existing ISWC submissions in the database. It is the equivalent of the CUR transaction in EDI. The PUT request will include the same required body as the batch POST above and will return the same response body object.

3.2. Search

The following are the search methods that will be supported by the new REST service.

3.2.1. GET / iswc/searchBylswc

This operation represents searching the ISWC database for ISWC metadata by ISWC.

ISWC Search \sim GET /iswc/searchByIswc Find ISWC metadata for specified ISWC **≙** ⊷ Try it out Parameters Name Description iswc * required The preferred ISWC string (path) Responses Description Links Code 200 Iswc metadata found No links application/json ~ Example Value | Schema ISWCMetadata V (createdDate* string(\$date-time) Data and time of creation in the system lastModifiedDate* string(\$date-time) Data and time of the latest update in the system lastModifiedBy* string Identifier of the last update in the system string pattern: T[0-9]{9}10 string minLength: 3 maxLength: 3 iswc* agency* A CISAC code of a submitting agency that allocated this ISWC originalTitle* string Original title of a musical composition otherTitles otherTitles > [...] interestedParties* > [...] works > [...] string pattern: T[θ-9]{9}1θ parentISWC A preferred ISWC of a parent of this ISWC.                    All linked preferred ISWCs. Presence of this field
                   indicates that those ISWCs merged to this ISWC.
                   string
                   pattern: T[0-9]{10}]
  }
```

3.2.2. POST / iswc/searchBylswc/batch

This operation represents searching the ISWC database for ISWC metadata by a batch of ISWC values.

3.2.3. GET / iswc/searchByAgencyWorkCode

This operation represents searching the ISWC database for ISWC metadata by Agency Work Code.

3.2.4. POST / iswc/searchByAgencyWorkCode/batch

This operation represents searching the ISWC database for ISWC metadata by a batch of Agency Work Codes.

3.2.5. POST / iswc/searchByTitleAndContributor

This operation represents searching the ISWC database for ISWC metadata by a combination of Titles and Contributors.

3.3. Merge

The following are the merging methods that will be supported by the new REST service.

3.3.1. POST / iswc/merge

This is a new operation and represents merging ISWC metadata associated with a provided list of ISWCs or Agency work codes and as part of the merge have an ISWC designated as preferred. It is the equivalent of the MER transaction in EDI.

POST	/iswc/merge	Merge ISWC meta-data associated with a provided list of ISWCs or Society Work Codes and as part of the merge have an ISWC designated as preferred.	
Parameters			
Name		Description	
preferred string	ISWC * required	The preferred ISWC	
(query)		preferrediswc - The preferred ISWC	
agency *	required	The agency submitting the merge request	
(query)		agency - The agency submitting the merge request	
Request bo	ody ^{required}	applic	ation/json 🗸
Example Valu	ie Schema		
<pre> { isucs agency } </pre>	Works	<pre>> [string pattern: T[0-9][10]] > [WorkNumber > { agencyCode string mint.ength: 3 agencyNorKCode string moxtength: 20 }]</pre>	
Responses			
Code	Description		Links
204	ISWC Metadata	merged and ISWC designated as preferred	No links
400	Bad request		No links
404	ISWC not found		No links

The preferredISWC passed as a parameter into the operation represents the preferredISWC that additional preferred ISWCs will be merged into. The request body contains an array of iswcs or agency work codes. Each preferred iswc pointed to by each array entry will be merged into the designated preferredISWC.

3.3.2. DELETE / iswc/merge

This is a new operation and represents deleting a set of incorrect metadata from a single Preferred ISWC that was incorrectly merged/matched previously. There is no equivalent transaction in EDI.

ut

3.4. Workflow Tasks

The following are the workflow tasks related methods that will be supported by the new REST service.

3.4.1. GET / iswc/workflowTasks

This operation retrieves all outstanding workflow tasks for an Agency. Each task has an associated array of ISWCMetadata objects returned.

GET /	/iswc/workflc	wTasks Retrieve a list of outstanding Workflow Tasks associated with an Agency	
Parameters			
Name		Description	
agency * rec string (query)	quired	CISAC Agency identifier agency - CISAC Agency identifier	
showWorkd string (query) status	flows * required	Workflows assigned to or created by my Agency Available values : AssignedToMe, CreatedByMe AssignedToMe v Workflow Status	
array[string] (query)	1	Available values : Outstanding, Approved, Rejected, Cancelled	
startIndex integer (query) pageLength integer (query)	n.	Start index for paging startIndex - Start Index for paging Number of records to return pageLength - Number of records to return	
Responses			
Code	Description		Links
200	List of outstanding \	/orkflow Tasks	No links
	Application/js Controls Accept header. Example Value Se	bon 🗸	
401	✓ [Workflo	wTask > {} الس	No links
404	Agency not found		No links

3.4.2. PATCH / iswc/workflowTasks

This operation enables an Agency to update the status of a set of outstanding workflow tasks:

PATCH	/iswc/workflowTasks Update the status of an outstanding Workflow Tasks associated with an Agency	≟ ←
Parameters	3	
Name	Description	
agency* string	CISAC Agency identifier	
(query)	agency - CISAC Agency identifier	
Request b	ody required application/jsor	ı ~
Example Val	lue Schema	
[{ "task "work "stat }]	ːld": 0, flowiype": "UpdateApproval", us": "Outstanding"	
Responses		
responded		
Code	Description	Links
207	Workflow Task updated	No links
	Indels type application/json Curvets Accept header.	
	Example Value Schema	
	✓ [WorkflowTask > {}]	
400	Bad Request	No links
401	Not Authorized	No links
404	Workflow Task not found	No links

Updating a workflow task status to Completed or Cancelled will complete the workflow task and it can no longer be updated. A daily scheduled task will run that will set the status of workflow tasks to Complete that are Pending for over a configurable number of days (default to 30 days).

Updating a workflow task status to Rejected will roll the affected entity back to its previous state, depending on the Workflow Type:

- UpdateApproval
- MergeApproval The WorkflowTask and MergeRequest record will be set to Complete and the linked child ISWCLinkedTo record will be set to Deleted.
- DemergeApproval The WorkflowTask and MergeRequest record will be set to Complete and the linked child ISWCLinkedTo record will be set to Active.

4 Conventions and Samples

This chapter provides additional information on key conventions that need to be taken into account when calling the API

4.1. Optional fields

Fields that are mandatory, marked with "*" in the previous chapter, must be provided. All other fields are optional.

Where fields are designated as optional the convention is to omit the tag completely rather than include the tag with no value present. E.G. The following is a valid POST /submission where the metadata is for a non-derived work:

```
"agency": "128",
"sourcedb": 128,
"workcode": "R31000011",
"category": "DOM",
"cisnetCreatedDate": "2019-11-05T00:31:20+00:00",
"originalTitle": "John C Whole other test work",
"interestedParties": [
    {
        "nameNumber": 458930030,
        "role": "C"
    },
    {
        "nameNumber": 734812541,
        "role": "C"
    }
]
```

Whereas the following is an invalid submission where the work submitted is identified as being a derived work but with an invalid ("") derivedWorkType.

This will return a response status of 400 (Bad Request) with the details similar to the following:

```
Request-Context: appId=cid-v1:7a7c5b27-8670-4812-bbff-c7c4ce4809e4
Date: Fri, 31 Jan 2020 08:42:21 GMT
Set-Cookie: ARRAffinity=56f22c389621b6a0f6709475c26954cdace8ccbe3106a1065cc528517175114f;Path=/;Ht
tpOnly;Domain=cisaciswcapiuat.azurewebsites.net
X-Powered-By: ASP.NET
Content-Length: 330
Content-Type: application/problem+json; charset=utf-8
{
  "errors": {
    "derivedWorkType": ["Required property 'derivedWorkType' expects a non-null value. Path '', li
ne 21, position 1."]
  },
  "type": "https://tools.ietf.org/html/rfc7231#section-6.5.1",
  "title": "One or more validation errors occurred.",
  "status": 400,
  "traceId": "|81874a2e8ab14cb18c9fa59102d1d47e.a495b646b3ac4c7c_51f285bd.a5f7311a_"
}
```

4.2. Date / Time fields

These fields have a designated format of "\$date-time" which corresponds to a date/time in ISO 8601 format.

"cisnetCreatedDate": "2019-11-05T08:31:20+00:00",

The above example represents 5th Nov 2019 at 8:30 and 20 seconds AM in the UTC time zone.

4.3. Agency, Source DB and API Security

Most API calls described in chapter three above require the provision of one or more of the following key identifying fields:

- agency

This refers to the submitter's society number represented as a three-character string including leading zeros if required. The list of CISAC society codes is available from CISACs website (search for "CISAC Society Codes")

E.G. "021" represents BMI, "058" represents SACEM etc.

- sourcedb

This refers to the hub that the society submission is been made through represented as an integer with a max of three digits. For societies integrating directly with the API then this should correspond to the numeric version of the agency field above. Hubs integrating with API on behalf of societies would use the society code of their hub as the value for this field.

E.G. BMI would use a sourcedb value of 21, SACEM would use a value of 58, the WID making a submission as a hub on behalf of one or more societies would use a value of 300 for the sourcedb.

In the UAT environment societies are free to test different scenarios for workflows and notifications by supplying values for agency and sourcedb that represent other societies. However, in production, rules will be configured in the API gateway to tie down each API key granted to a specific set of sourcedb and agency values.

5 Understanding Common Error Codes

This chapter provides additional information on interpreting and dealing with error codes returned by the API.

5.1. Error Codes cross referenced with Business Rules

The following table provides the most common error codes and descriptions cross referenced with the underlying business rule(s) responsible for triggering them. A summary of the business rules is included in separate sections of this chapter below. The business rules are categorized as Initial Validation (IV), Post Matching Validation (PV), Eligibility to Assign ISWCs (EL), Metadata Standardization (MD) and Matching (MAT).

Error Code	Message	Rules
100	Generic Error	
102	I.P. Name Number is required	IV/19
103	Source Society Code is invalid	IV/10, PV/25
104	At least one I.P. is required on a submission	IV/02
105	ISWC System Unable to process record, please resubmit	IV/01
106	I.P. Role Code is required	IV/22
107	Preferred ISWC is required	IV/13
108	The IP on the work submission is not a creator affiliated with the source society	IV/24
109	Work Titles are required	IV/05
110	Only one Original Title allowed	IV/06
111	At least one creator I.P. is required	IV/07
112	Work Title Type is required	IV/31
113	ISWC format error [T][0-9]{10}	IV/14
114	An existing ISWC logical work that already contains active (not deleted) submission from the submitting society	PV/06
115	Specified source db is not allowed to make a submission for the specified society	IV/08
116	Modification of an Archived ISWC is not permitted	PV/23, PV/26
117	Requested ISWC preferred does not exist on ISWC System	PV/22, PV/24, PV/25
118	At least one Derived From DF record is required for a Derived Work of type "Modified Version"	IV/34

119	The ISWC provided in the Derived From DF record is not a valid Preferred ISWC in the ISWC Database	IV/34, IV/36, IV/38
120	Each Derived From DF record must contain either an ISWC or a Title	IV/34,IV/36, IV/38
121	At least one Derived From DF record is required for a Derived Work of type "Composite"	IV/36
122	Invalid Disambiguation ISWC	IV/40
123	Invalid disambiguation reason code	IV/40
124	One or more Disambiguation ISWCs must be provided	IV/40
125	BLTVR must be blank or contain the letters B, L, T, V or R	IV/40
126	Performer information must contain a Second Name or a Second Name and a First Name	IV/40
127	Submitted titles don't match current ISWC Documentation	PV/04
128	One or more specified Disambiguation ISWCs are not Preferred ISWCs in the ISWC Database	PV/30
129	Invalid Disambiguation ISWC	IV/40
130	The Agency Work Number provided does not exist in the ISWC Database	PV/01
131	Submission is Deleted in the ISWC Database	PV/05
132	The Preferred ISWCs specified in the merge do not exist in the ISWC database	PV/09
133	Delete reason has not been provided	PV/13
134	I.P. Name Number is invalid, must be numeric	IV/20
135	Work Title Type is invalid	IV/31
136	Society Work Code is required	IV/11
137	IP Name Number must be status 1 or 2 and exist in the IPI database	MD/16
138	Source Society Database Code is invalid	IV/12, PV/25
139	I.P. Role Code is invalid	IV/22
140	The submitted transaction is not ISWC eligible and either no matching Preferred ISWC or multiple matches have been found through the matching rules as per MAT/04	PV/29
141	ISWC format error – Invalid Check Digit	IV/15
142	No specific error number - the whole file is rejected	IV/09
143	Requested ISWC metadata does not exist for specified Society Work Code, Society Code and Society Database Code	PV/25
144	The submitting agency may not update Preferred ISWC level metadata	PV/20
145	The submitting agency may only remove IPs that they control	PV/21
146	Instrumentation Code is invalid	IV/40

147	At least one Derived From DF record is required for a Derived Work of type "Excerpt"	IV/38
148	I.P. is not accepted	IV/29
149	Agency is not Eligible for a Source ISWC	EL/03
150	Submitter is not ISWC Eligible for all works to be merged	PV/10
151	Agency provided does not exist in the database	PV/11
152	Workflow Task with the properties provided does not exist	PV/11
153	The Preferred ISWC specified in the demerge does not exist in the ISWC database	PV/09
154	None of the provided Creators are affiliated with a Society	EL/02
155	Concurrency Error: The Submission being updated has already changed. Please try again.	
201	DerivedFrom ISWCs do not match exactly one matching preferred ISWC	
202	Merge ISWCs do not match exactly one matching preferred ISWC	
203	Merge Agency Work Numbers do not match exactly one matching Agency Work Number	
247	Submitted IPs do not match current ISWC Documentation	PV/04

5.2. Business Rules

The following sections describes an extract of the detailed business rules that are referenced in the above messages and that are implemented by ISWC Database. In most scenarios it isn't necessary for Agency developers to be fully familiar with the internal rules being applied by the service. However, the information is provided here to help provide additional background information when troubleshooting specific errors being returned by the API.

The "Transactions" column indicates which transaction type(s) the rule relates to. The following mapping can be used to cross reference these with the REST API operations:

Transaction	API Operation
CAR	POST /submission
	POST /submission/batch
CUR	PUT /submission
	PUT /submission/batch
CDR	DELETE /submission
MER	POST /iswc/merge
COR	GET /iswc/workflowTasks
COA	PATCH /iswc/workflowTasks

CIQ	GET /iswc/findBySocietyAndWorkCode POST /iswc/findBySocietyAndWorkCode/batch
СМQ	GET /iswc/searchByIswc POST /iswc/searchByIswc/batch

The "Rule Configuration & Implementation" column provides additional details about how the rule is implemented in service. It references configuration options available to CISAC ISWC administration personnel that can be used to alter the rule behavior along with the initial default configuration (current setting). In most instances this detail is not relevant to a submitting agency, but it is provided for completeness.

5.2.1. Initial Validation (IV) Rules

Initial Validation (IV) rules covers all the validation that is done initially (without retrieving additional data from the ISWC database).

Ref	Transactions	Rule	Rule Configuration & Implementation
IV/01	CAR, CUR, CDR, CMQ, CIQ, MER,	Only one CAR/CUR/CDR/CMQ/CIQ record is allowed per transaction.	This rule applies only to the EDI file formats and will be implemented in that specification (WBS 1.7).
	COR, COA	If this check fails then the	
		transaction will be rejected.	
		Error Conditions:	
		- 105 (CSI Unable to process	
		record, please resubmit)	
IV/02	CAR, CUR,	For Add/Update/ ISWC Query	Configuration:
	CIQ	transactions (CAR, CUR, CIQ) at	Parameter Name: MustHaveOnelP
		least one CIP record must be	Possible Parameter Values: true, false
		included in each transaction.	Description: Validate the submission to
			ensure that at least one IP is provided.
		If this check fails, then the	
		transaction will be rejected.	Input Data:
			submission/interestedParties array
		Error Conditions:	
		- 104 (At least one I.P. is required on a submission)	
IV/05	CAR, CUR,	For Add/Update/ ISWC Query	This rule applies only to the EDI file formats
	CIQ	transactions (CAR, CUR, CIQ) at	and will be implemented in that specification
		least one Original Title must be	(WBS 1.7). I.E. In the REST format above it is
		included in each transaction.	mandatory so therefore must be provided in order to make a successful POST request.
		The transaction will be rejected if	•
		it's contained work submission	

		doesn't have an original title.	
		Error Conditions:	
		- 109 (Work Title(s) are required)	
IV/06	CAR, CUR,	If work submission contains more	Configuration:
	CDR	than one original title, transaction	Parameter Name: OnlyOneOriginalTitle
		is rejected. (TR)	Possible Parameter Values: true, false
		The transaction will be rejected if	ensure that only one original title is provided
		it's contained work submission	choice that only one original title is provided.
		has more than one original title.	Input Data:
			submission/originalTitle
		Error Conditions:	submission/otherTitles array
		- 110 (Only one Original Title	Additional Information
		allowed)	As the original Title field is mandatory for the
			Submission object this validation should
			ensure that there are no "OT" type titles listed
			in the otherTitles array.
11/07		If work submission doos not	Configuration
10/07	COR, CDR, CAR	contain IP with creator role (role:	<u>Configuration:</u> Parameter Name: MinOfOneCreatorRole
	.	C, CA, A, AR, AD, TR, SA, SR) then	Possible Parameter Values: blank or list of
		the transaction is rejected. (TR)	comma separated list of roles. Will be initially
			set up with list "C, CA, A, AR, AD, TR, SA, SR"
		Error conditions:	Description Validate the submission to
		required)	ensure that it contains at least one IP with one
			of the roles listed in the configuration value.
			List of roles to be provided separated by
			commas. E.G. "C, CA, A, AR, AD, TR, SA, SR".
			Blank value means that validation rule is not
			applied.
			Input Data:
			Submission/interestedParties[]/role
IV/08	All	If the request is from a society not	Configuration:

		be rejected. This applies to EDI	Description: Validate that the
		and Webservice interfaces. The	submission/preferredIswc field is provided for
		Preferred ISWC submitted must	PUT (update) and DELETE submissions. True
		exist in the ISWC database.	or false.
		Error Conditions:	Input Data:
		- 107 (Preferred ISWC is required)	Submission/preterrealswc
			Additional Information:
			The preferredISWC field is mandatory in the
			REST definition so it won't be possible to
			switch off validation of this for DELETE
			operations

IV	//14	All	If provided, the Preferred / Archived ISWC must have length of 11 characters (TR), must begin with a "T" and must match the following pattern: [T][0-9]{10} If this isn't the case then the transaction will be rejected.	Configuration: Parameter Name: ValidateISWCFormat Possible Parameter Values: N/A Description: Validate that the submission/preferredIswc field, if provided, conforms to the validation pattern [T][0-9]{10} Input Data: Submission (preferredIswc
			- 110 (ISWC format error [T][0- 9]{10})	Submission/preferrediswc Submission/iswc Additional Information: The format validation is included in the REST definition for the field, so it won't be possible to switch on/off this validation. The error condition/messages have been simplified from the original agreed business rules.
IV	//15	All	If provided, the Preferred / Archived ISWC must match valid "check digit" as per Annex B of ISO 15707 standard document. If this isn't the case, then the transaction will be rejected. Error Conditions: - 111 (ISWC format error – Invalid Check Digit)	Configuration: Parameter Name: ValidateISWCCheckDigit Possible Parameter Values: true or false Description: Validate that the submission/preferredIswc field, if provided, has a valid check digit as per the ISO 15707 standard. Input Data: Submission/preferredIswc Submission/preferredIswc Submission/iswc Additional Information: The check digit calculation is included in format validation is included in section 3.4 of
IV	//44	CMQ	The Preferred ISWC field is required For CMQ transactions the preferred ISWC field is required. If this isn't the case the transaction will be rejected. No Society Code, Source DB Code or Society Work Code values should be provided. Error conditions:	the ISO document available <u>here</u> .

		- 107 (Preferred ISWC is required) See related rule PV/22 (Preferred ISWC must exist in the ISWC database for CUR, CDR and CMQ transactions)	
IV/19	CAR, CUR and CIQ	IP Name Number must be entered for CAR, CUR and CIQ transaction (TR) If this isn't the case, then the transaction will be rejected. Error Conditions: - 102 (I.P. Name Number is required)	Configuration:Parameter Name:ValidateIPNameNumberExistsPossible Parameter Values: N/ADescription: Validate that eachInterestedParty item included in thesubmission, has a nameNumber field value.Input Data:Submission/interestedParties[].nameNumberAdditional Information:The field is marked as required in the RESTdefinition for each interestedParty entry, so itwon't be possible to switch on/off thisvalidation.
IV/20	All	If provided, then the IP Name Number must be numeric value. (TR) If this isn't the case then the transaction will be rejected. Error Conditions: 103 (I.P. Name Number is invalid, must be numeric)	This rule applies only to the EDI file formats and will be implemented in that specification (WBS 1.7). I.E. In the REST format above it is mandatory so therefore must be provided in order to make a successful POST request. <u>Input Data:</u> Submission/interestedParties[].nameNumber

IV/22	All	Where into for an IP is provided, the IP Role must be entered, and that role must be a valid IP role	This rule applies only to the EDI file formats and will be implemented in that specification
		code.	mandatory so therefore must be provided in order to make a successful POST request.
		If this isn't the case then the	
		transaction will be rejected.	Input Data: Submission/interestedParties[].role
		Only Writer or Publisher/Admin	
		roles are used by ISWC database	
		for matching (where relevant),	
		eligibility, assignment. Any other	
		IPs with roles that are valid CISAC	
		roles will be ignored, I.E. Not	
		saved in core tables, not used for	
		matching, eligibility or	
		Writer roles: C CA A AR	
		AD TR SA SR	
		Publisher/Admin roles: E, AM	
		If a role entered does not	
		correspond to a valid CISAC role	
		code then the transaction will be	
		rejected. I.E. Will only be rejected	
		If the role code isn't one of the	
		Frror Conditions	
		- 106 (I.P. Role Code is required)	
		- 107 (I.P. Role Code is invalid)	
IV/25	CAR, CUR	CSI Processing of work	Configuration:

		then the transaction should be	other cases (I.E. ISWC eligible and
		rejected if the submitter is ISWC	authoritative for the IP) status 3 IPS should
		eligible and authoritative for that IP.	be rejected with the error condition as per
			error condition information below.
		Note: This rule is applied to CAR and	
		CUR transactions where the	Note: Rules for determining
		submitting society both has an	authoritativeness and ISWC Eligibility are
		interest in the work submitted	described in the related matching
		(ISWC Eligible) and where they don't	specification section 5.8.
		have an interest in the work	
		submitted (Not ISWC Eligible).	Input Data:
			Submission/interestedParties[].nameNumber
		Error Conditions:	
		104 (IP Name Number must be	Additional Information:
		status 1 or 2 and exist in the IPI	Lookup the IPNameUsage table to retrieve
		database)	the IPBaseNumber for the provided
			IPNameNumber field. Lookup the Status of
			the IPIBaseNumber using the Status table. If
			the Status = 3 and the record should be

			rejected as per the above rule then reject the transaction. Any errors should result in error 104.
MD/17	All	The IPI Base Number for any Creator's IP Name Number recorded as part of a Group Pseudonym on the IPI are included as valid Creator IPs. This is done through querying the Name table in the IPI Schema and returning the IPI Base Number from the related Interested Party record. As per info from SUISA: Group pseudonyms (PG) are chosen by a group of creators as a generic or collective designation. The PG is linked directly to the IP's. The PG's have one IP Name Number and one to many IP Base Numbers, as the PG can be linked to many IP's.	Configuration:Parameter Name:ResolvelPIGroupPseudonymPossible Parameter Values: true or falseNote: This parameter will be configured to true initially.Description: When set to "true" group pseudonyms will be saved to the ISWC database along with their contained group member IPs. Matching will exclude group pseudonyms – i.e. will just use the contained group members. When set to false no special logic to explode out group pseudonyms will be applied. They will be treated like any other name number type.Input Data: Submission/interestedParties[].nameNumber
		Rule to be applied: If an IP Name Number for a creator that is identified as a 'PG' is submitted: Then the system should identify the other IPI Base Numbers associated with that PG Name Number and include those IPI Base Numbers along with their "PA" IP Name Number as valid contributors on the submission. See Appendix B (ref 1) of this document for sample queries to do this from the existing CSI IPI database.	Additional Information: When the parameter is set to true do the following: If a group pseudonym is provided in a submission and the submitter is ISWC eligible and authoritative for the 'PG' IP then include in the data to be saved in the database the 'PA' name number of each IP in the group. Mark these added IPs as not authoritative. Mark the 'PG' IP as authoritative. Include the added IPs in the contributor count but exclude the 'PG' IP. In all other cases then include in the data to be saved in the database the 'PA' name number of each IP in the group. Mark the 'PG' IP as not authoritative. Calculate the authoritativeness of the added group members as per standard logic (see matching specification section 5.8 for details). Always

			exclude PG IPs from the IP count and matching.
			See the appendix tab (ref 1) of the Business rules document for details of how to identify the group member IPs for a PG IP.
			Note: The above approach means that submitted authoritative PGs will be returned as the authoritative IPs by search services (and therefore services for publishers and DSPs that depend on these search services).
			<i>Note:</i> A known risk with this approach is that if the PG members change over time then submissions would no longer match with the original ISWC
MD/01	CAR, CUR	When provided, the IPI base numbers will be rolled-up within the following categories: Original Authors: C, CA, A Musical Arrangers: AR, SR	<u>Configuration:</u> Parameter Name: CalculateRolledUpRole Possible Parameter Values: C(C,CA,A), MA(AR,SR), TA(AD,SA,TR), E(E,MA)
		This rule is about calculating a rolled-up-role for creator type contributors that will be used in matching.	an ISWC Database rolled up role. Specify each rolled up role in a comma separated list with each role to be rolled up listed in () brackets. E.G. C(C,CA,A), MA(AR,SR), TA(AD,SA,TR), E(E,MA)
		Note: This role mapping is used when matching against the ISWC database and when saving work metadata information to the ISWC database. It ensures that two submissions for the same work, where one submission has an IP with say a role of "C" and another	Input Data: Submission/interestedParties[].nameNumber Additional Information: Where a role that is provided cannot be mapped to a rolled-up role map it to a
		submission uses a role of say "CA", will be seen as having the same rolled-up role and therefore will have matching metadata.	default role of X. These X role IPs won't be saved in the ISWC Database. All roles that role up to "E" will be saved in the ISWC Database Publisher table while all roles that role up to C, MA or TA will be saved in the Creator table.
		as part of determining eligibility for	

		ISWC are not saved in the core, ISWC database and are not rolled up by role. Note: for CMQ and CDR transactions IP information is ignored if provided.	
MD/03	CAR, CUR	All original and alternates title types are processed (standardized) except for Part Titles and Component Titles (title type PT, CT). PT and CT type titles are not standardised and are not saved in the system. I.E. They are ignored. Note: This rule is applied in the findByMetadata webservice operation. However, this rule does not apply to CIQ, CMQ and CDR transactions.	Configuration: Parameter Name: ExcludeTitleTypes Possible Parameter Values: PT,CT Description: Exclude the title types listed in the parameter value. E.G. a value of "PT,CT" means that any titles of type PT or CT will not be saved in the core ISWC data structures (Title Table) and will not be used for matching. Input Data: Submission/otherTitles[].title
MD/06	CAR, CUR	Step 1 - remove special characters (all characters other than A-Z, space and 0-9) This is an existing CSI rule. Propose that this is kept in place going forward also. The rule will be configurable so that it can be switched off/on.	Configuration:Parameter Name: RemoveTitleCharactersPossible Parameter Values: Any matchingregular expressionDescription: Exclude any character thatdoesn't fit the configured regular expressionpattern. E.G. "[a-z][A-Z][0-9] " will removeall characters other that A-Z, space and 0-9.Input Data:Submission.originalTitleSubmission/otherTitles[].titleAdditional Information:This rule is applied when calculating theStandardized Title field in the Title table. Theunstandardized title will still be saved to thedatabase and both the standardized andunstandardized titles will be used inmatching (depending on configuration ofmatching)

		cannot request that an ISWC is	A submitter is iswe eligible for a submitted
		generated for that request.	work where:
			The requestor represents at least one IP
		In addition, a requestor is deemed	specified in the request that has one of the
		aligible to request allocation of	configured roles
		new ISWC for a set of provided	configured fores
		metadata if all of the creator IPs	
		are public domain IPs and the	OR
		AllowPDWorkSubmissions	
		configuration parameter is set to	
		berniger attorn parameter is set to	

		true as per related rule IV/24 (See section 3.4 above)	The AllowPDWorkSubmissions flag is set to true and all the <u>creator</u> IPs on the work are identified as public domain IPs Determination of which society represents a given IP is determined by referencing the IPI data for each IP on the request and checking to see if the requesting society ever represented the IP for any right type.
EL/03	CUR, CDR, MER	A requestor is deemed ISWC eligible for a CUR, CDR or MER submission if: - the requestor has at least one IP specified in the request that is either a creator or an original publisher / administrator, otherwise the requestor is deemed ISWC ineligible. In addition, a requestor is deemed eligible to request allocation of new ISWC for a set of provided metadata if all of the creator IPs are public domain IPs and the AllowPDWorkSubmissions configuration parameter is set to true as per related rule IV/24 (See section 3.4 above) ISWC eligible requests can carry out updates or deletions at the Preferred ISWC level. I.E. They can update the core details associated with the Preferred ISWC including titles, IPS etc or delete them. ISWC ineligible requests can only carry out updates to the requestors previously submitted workinfo data that is associated with the designated Preferred ISWC. Specifically an ISWC ineligible request can cause the movement of previously submitted workinfo data from an existing Preferred	Configuration: Parameter Name: ISWCEligibleRoles Possible Parameter Values: List of comma separated rolled up IP Roles (see MD/01 for info) that will be considered ISWC eligible. Creator roles will be listed first surrounded by () and then the non-creator roles will be listed: Initially configured values will be (C,MA,TA),(E) Description: A submitter is ISWC eligible for a submitted work where: The requestor represents at least one IP specified in the request that has one of the configured roles OR The AllowPDWorkSubmissions flag is set to true and all the <u>creator</u> IPs on the work are identified as public domain IPs Determination of which society represents a given IP is determined by referencing the IPI data for each IP on the request and checking to see if the requesting society ever represented the IP for any right type. Note: Moving of previously submitted workinfo data is done not by logically deleting and re-adding but by relinking the workinfo record to a different Preferred ISWC.

		ISWC to another Preferred ISWC or the deletion of previously submitted workinfo data.	Attempts to update or delete information at the Preferred ISWC or at the workinfo level may be rejected based on validation rules. E.G. IV/02 (No IP information provided in submission), IV/13 (Preferred ISWC is a mandatory field for CUR, CDR and CMQ transactions), PV/22 (Preferred ISWC must exist in ISWC database), PV/23 (Modification of an Archived ISWC is not permitted).
EL/02	CAR	If a creator is not a member of a copyright society that is affiliated to an Agency, this creator can request an Agency to allocate ISWCs to works on his behalf	Configuration: Parameter Name: AllowNonAffiliatedSubmissions Possible Parameter Values: true or false. Will be set initially to true. Description: If all the creator IPs (as per config of ISWCEligibleRoles parameter – see rules above for detail) on work submission are not affiliated to a society then the submitter will be considered ISWC eligible for the work and an ISWC can be assigned by the system. The system determines that an IP is not affiliated to any society by checking to see if there are any entries in the IPI_AGM table for the IPs base number. If there are none then
			then IP is considered not to be affiliated with any society.

5.2.4. Post Matching Validation (PV) Rules

These rules are applied to determine if the submitter is eligible to allocate a <u>**new**</u> ISWC for the metadata being submitted.

Ref Transactions Rule

Details

PV/01	CDR	If Record Type is equal to CDR, and the society work number provided <u>does not</u> already exist in the ISWC database then this transaction should be rejected.	
PV/02	CAR	If Record Type is equal to CAR and the society work number provided <u>does</u> already exist in the ISWC database then mark the CAR transaction in the Audit as converted to CUR, create a new CUR transaction and then finish the processing of this CAR transaction.	Note: The resubmitted CUR transaction will be processed as per regular CUR transactions.
PV/03	CUR	If Record Type is equal to CUR and the society work number provided <u>does not</u> already exist in the ISWC database then mark the CUR transaction in the Audit as converted to CAR, create a new CAR transaction and then finish the processing of this CUR transaction.	Note: The resubmitted CAR transaction will be processed as per regular CAR transactions.
PV/22	CUR, CDR, CMQ	Preferred ISWC must exist in the ISWC database for CUR, CDR and CMQ. (TR)	The Preferred ISWC submitted must exist in the ISWC database. Also, the Preferred ISWC found in the ISWC Database (by society, database and society work code) must match the Preferred ISWC in the submission for CDR transactions. Error Conditions: - 117 (Requested ISWC (preferred) does not exist on CSI)
PV/04	CAR	For CAR transactions where a single existing Preferred ISWC has been identified by the matching rules MAT/01 and MAT/02 as a match but where the titles and/or IPs don't match (as per rules MAT/41 or MAT/43) then the transaction should be rejected.	Error Conditions: - 247 Submitted IPs do not match current CSI Documentation - (new) Submitted titles don't match current CSI Documentation
PV/05	CUR	If Record Type is CUR and the workinfo record is "deleted" on CSI, transaction is rejected. (TR)	Note: This existence check is done as per MAT/17 or MAT/18.

PV/06	CAR	For add transactions	This is an existing CSI rule that only applies to
		not point to an existing CSI logical work that already	applied in the new ISWC Database for either backwards compatible or modern messaging.
		contains active(not deleted)	The rule is left here so that there is a record of the changed approach
		society, transaction is rejected.	
		Example:	The rule is as follows: The submitting society can't add a different
		ISWC1 in the system was	society work number from one they have
		assigned to a work submitted by	previously submitted (and which is not
		SOCAN submits a different work	the transaction is rejected.
		with a SOCAN writer, with the	
		transaction is rejected stating	- 114 (An existing CSI logical work that already
		that the ISWC1 already	contains active(not deleted) submission from
		exist and attached to a work from SOCAN.	the submitting society)
PV/09	MER	If Record Type is equal to MER, the Preferred ISWCs specified in	Note: The ability to identify the Preferred ISWCs to be merged by Submitting Society
		ISWC database and must not be	both fully domestic work merges and merges
		logically deleted. The Preferred	of works with split copyright. If one or both
		identified by either the	the ISWC database then the transaction will
		Preferred ISWC or the	be rejected.
		Submitting Society Work Code. Where both are provided then	
		the Submitting Society Work Code will be used.	
PV/10	MER	If Record Type is equal to MER	Note: We have assumed that the IPs
		be ISWC eligible for all of the	be retrieved from the ISWC database rather
		works to be merged in the	than requiring IP information to be provided
		details of determining ISWC	This will be confirmed in the data exchange
		eligibility.	format design work packages for modern messaging in FDI and webservices
PV/11	COA, COR	A Participating Society will have	
		an opportunity to reject any proposed changes to existing	
		Preferred ISWC level meta-data	
		in which it has an interest.	

PV/12	demergeISW CMetadata	If a Participating Society has not populated the Disambiguation Flag and subsequently discovers that the second submission was in fact a unique work, it can use the De-Merge process as described in Section 9 of the "To Be" document to ensure the second unique work receives its own ISWC.	
PV/13	CDR	Delete transactions will contain a reason code describing the reason for the deletion e.g. fraud, clerical error etc.	
PV/14	CDR	Delete requests of Preferred ISWC level information controlled by multiple Participating Societies would trigger a Corrections Process. Assuming other Participating Societies agree, ISWCs associated with the deleted work code will be logically deleted.	This applies to ISWC eligible delete submissions. ISWC ineligible delete submissions involve the removal of previously submitted workinfo details for a submitter from a Preferred ISWC and wont trigger a corrections process.
PV/20	CUR	For modifications to unique works (at the Preferred ISWC level as per MAT/17 and MAT/18) the submitting society may add or update any IPs on a unique work	
PV/21	CUR	For modifications to a Preferred ISWC where there are workinfo records from more than one submitter who is ISWC eligible the submitting society may add any Creator IP, however they can only remove (or delete) the Creator IPs that they control	
PV/23	CUR	Modification of an Archived ISWC is not permitted. (TR)	The Archived ISWC, if provided in an update submission, must match the Archived ISWC found in the retrieved workinfo record (retrieved using society, database and society work code). Error conditions: - 116 (Modification of an Archived ISWC is not permitted)

PV/24	CAR	If the work submission contains a Preferred ISWC that does not exist on CSI then the transaction is rejected.	For a CAR transaction the Archived ISWC field represents the submitted ISWC field. When the submitter includes the Preferred ISWC in the submission then this represents the situation where the submitter wants to add the submitted metadata to the ISWC designated in the Preferred ISWC. The Preferred ISWC submitted must exist as a Preferred ISWC in the ISWC database. If this isn't the case then the transaction is rejected. Also, if the Preferred ISWC does exist but doesn't match the same record found by using the Archived ISWC (Submitted ISWC), when provided, then the transaction is also rejected. Error conditions: - 117 (Requested ISWC (preferred) does not exist on CSI)
PV/25	CDR	The Society Code, Source DB Code, Society Work Code and Preferred ISWC must match the details in the ISWC database.	The submitted Society Code, Source DB Code and Society Work Code are used to find a matching workinfo record. See related rules IV/13 and PV/22 where the provided Preferred ISWC must match a Preferred ISWC in the ISWC database. For a CDR transaction the found Preferred ISWC must be the Preferred ISWC associated with the workinfo record found using the Society Code, Source DB Code and Society Work Code. Error Conditions: - F103 (Source Society Code is Invalid) - 105 (Source Society Database Code is Invalid) - T103 (Requested CSI metadata does not exist for specified Society Work Code, Society Code and Society Database Code) - 117 (Requested ISWC (preferred) does not exist on CSI)

PV/26	CUR	The Society Code, Source DB Code, Society Work Code and Preferred ISWC are required and must exist in the ISWC database	The submitted Society Code, Source DB Code and Society Work Code are used to find a matching workinfo record. See related rule PV/03 (If the Society Work Code provided does not exist switch transaction to a CAR transaction).
			See related rules are IV/13 and PV/22 where the provided Preferred ISWC must match a Preferred ISWC in the ISWC database.
			Note: If the work found by Preferred ISWC is not the same as the work found through the retrieved workinfo record then the update transaction will be taken to mean the moving of the workinfo data from it's current Preferred ISWC to the new Preferred ISWC record. This move of workinfo will take place if the rest of the metadata matches between the two works found.
			If the rest of the metadata does not match between the two works found then the transaction will be rejected.
			Error conditions: - 116 (Modification of an Archived ISWC is not permitted)
			See "Matching" rule MAT/17 for details.
PV/29	CAR	If the submitted transaction is not ISWC eligible and no matching Preferred ISWC has	There are some specific exceptions to this rule as follows:
		been found through the matching rules as per MAT/04 then the transaction should be rejected with an error.	- If all the creator role IPs for the work are not affiliated with any society then the transaction will not be rejected. See EL/02 for details.
			Error Conditions: - 108 (The IP on the work submission is not a creator or publisher/administrator affiliated with the source society)
PV/30	CAR	If one or more Disambiguation ISWCs are provided then these ISWCs must exist as valid	Error Conditions: - New (One or more specified Disambiguation

		Preferred ISWCs in the ISWC database.	ISWCs are not Preferred ISWCs in the ISWC Database)
IV/40	CAR	Where one or more Disambiguation ISWCs were provided. Each of the ISWCs provided must have a single positive match to a Preferred ISWC as found through matching. Error Conditions: - New ("Invalid Disambiguation ISWC")	Configuration:Parameter Name:ValidateDisambiguationISWCsPossible Parameter Values: true or falseDescription: Applies to submissions with a disambiguation value of true. If this configuration option is enabled then provided iswcs in the disambiguateFromIswcs list must all exist in the ISWC database as Preferred ISWCs.Input Data: Submission/disambiguateFromIswcs[].iswcAdditional Information: See section 3.2 above for additional static validation of this information.
